

BRAND GUIDELINES

Approved master identity, digital system and production handoff
Version 1.0

YOUR WORLD OF DISCOVERY

Brand overview

SAVO is Kuwait's discovery-led commerce identity: modern, confident, accessible and premium, with value communicated clearly but never cheaply.

Approved positioning: Your World of Discovery. English and Arabic communications should feel native, direct and equally considered.

The approved logo

The identity combines a Dark Navy rounded-square S mark, Teal S, Fire dot and bold outlined AVO artwork. The authoritative source is the outlined Illustrator master.

The AVO artwork is custom outlined geometry. Its originating typeface is unverified and must never be retyped, reconstructed or approximated.

Logo variations

Use the Black/primary lockup on light surfaces, the White/reversed lockup on dark surfaces, and the full-color standalone mark for compact square applications.

- Primary: complete approved lockup on a quiet light surface.
- Reversed: complete White lockup on Ink or another dark surface.
- Standalone: full-color mark for icons, avatars and compact UI.
- No approved monochrome standalone mark exists; do not fabricate one.

Clear space

Define x as 25% of the displayed S-mark width. Maintain at least x on all sides. No type, image detail, edge, trim or hardware may enter this zone.

Minimum size

Digital lockup: 120 px wide. Digital mark: 16 px absolute minimum, 32 px preferred. Print lockup: 32 mm wide. Print mark: 8 mm square. Require physical samples for embroidery and coarse reproduction.

Logo misuse

The following treatments are prohibited.

- Do not stretch, squash, rotate or crop.
- Do not recolor, add gradients, shadows or outlines.
- Do not change AVO, S geometry, corner radius, spacing or Fire-dot position.
- Do not rearrange elements or place the logo on low-contrast imagery.
- Do not recreate the identity with editable text, HTML or CSS.

Color palette

Core colors are read directly from the approved outlined master. UI Ink is a supporting digital surface, not a replacement for logo Dark Navy.

COLOR	HEX	RGB	HSL	ROLE
Dark Navy	#1A1C24	26, 28, 36	228, 16%, 12%	Mark enclosure
Teal	#00C9A7	0, 201, 167	170, 100%, 39%	Core signature
Fire	#FF4D2E	255, 77, 46	9, 100%, 59%	Urgency/accent
Black	#000000	0, 0, 0	0, 0%, 0%	Mono lockup
White	#FFFFFF	255, 255, 255	0, 0%, 100%	Reversed
UI Ink	#0D0E12	13, 14, 18	228, 16%, 6%	Digital surface

Digital color

Use the documented sRGB HEX/RGB values. Preserve sRGB profiles in raster exports and never sample approximate colors from screenshots.

Print color

The immutable master is RGB. No ICC profile, substrate or press condition was supplied, so no CMYK conversion is authoritative.

Convert only a duplicate through the vendor's agreed device/substrate profile. Pantone matching requires current physical swatches, a process drawdown and written approval.

Typography system

Application typography uses Lexend Exa for display/headings, Manrope for English UI/body, and Cairo for Arabic. Fonts are acquired separately under their applicable licenses and are not packaged here.

English typography

Recommended hierarchy: Display and H1 Lexend Exa 700-800; H2 700; H3 600-700; Manrope Body Large 500, Body 400-500, Small/Caption 400-600 and Button/CTA 700.

Use sentence case for interface language. Reserve uppercase for short labels and urgency markers.

Arabic typography

Use Cairo with right-to-left direction and natural right alignment for standalone Arabic. Suggested weights: headings 700, body 400-500 and labels/CTAs 600-700. Translate meaning and tone, not word order. Never mirror the SAVO artwork.

Iconography

Use simple geometric line icons with consistent optical size and stroke. Teal indicates active/discovery states; Fire is reserved for urgency and exceptional emphasis.

Digital usage

Use SVG for responsive website and app lockups. Use supplied transparent PNGs only where vectors are unsupported. The full-color mark is reserved for square icons and compact controls.

- Header, mobile header, drawer and footer: White lockup on dark surfaces.
- Browser, Apple, PWA and app icons: full-color mark.
- Always preserve intrinsic aspect ratio and transparency.

Social media

Use the full-color mark for avatars and the appropriate lockup for covers. Platform bases contain no invented campaign copy. Revalidate crops and safe areas when publishing because platform specifications change.

Marketing applications

Business cards, letterheads, envelopes, invoice/quotation headers, email signatures, presentations, advertisements and flyers use the locked identity, documented type system and explicit placeholders for unknown business information.

Packaging

Supplier-issued dielines are mandatory. Keep identity artwork clear of folds, seams, closures, trim, heat seals and barcodes. Dark or transparent materials may require approved white ink.

- Shopping and delivery bags
- Shipping boxes and tape
- Product stickers and seals
- Thank-you cards and tissue

Physical and office

Exterior and interior signs, reception marks, decals, badges, uniforms and vehicles preserve the same geometry and clear space. Materials, mounting, dimensions and local approvals are vendor inputs. Require physical samples.

Brand voice

SAVO is discovery-driven, confident, accessible-premium, value-conscious and bilingual by design. Headlines are concise and benefit-led. CTAs use direct verbs: Discover, Explore, Shop, Add to Cart and View Deals.

- Avoid unsupported superlatives and fake scarcity.
- Avoid luxury cliches, bargain-bin language and quickly dated slang.
- Arabic should be natural contemporary language, not mechanical translation.

Printer handoff

Use the outlined RGB AI master or vector PDF. Confirm process, substrate, ICC profile, black construction, trapping, bleed, overprint and white-ink requirements before deriving any production file. Require digital and physical proofs.

Asset index

01 master | 02 SVG | 03 PNG | 04 print | 05 digital | 06 icons | 07 social | 08 guidelines | 09 templates | 10 packaging | 11 office | 12 archive

Never overwrite the master. Create dated working duplicates, retain approvals, and archive superseded derivatives.
